Education

ABES Institute Of Technology

Bachelor of Technology, Computer Science Engineering

2020 – 2024

Ghaziabad, Uttar Pradesh

Experience

Jellyspace

Software Engineer | Full Stack | AI Integration

Angular 14+, Rete.js, Node.js, PostgreSQL, Rust, Stripe, kafka, Docker

Sep 2024 – Present

Berlin, Germany — Remote

- Built a **low-code/no-code workflow canvas** in Angular 14 using **Rete.js** (node-based drag-and-drop editor) enabling users to visually orchestrate supply-chain workflows.
- Developed high-performance **Rust backend services (Actix Web + Diesel)** to validate and execute workflows, persisting workflow state and audit logs in PostgreSQL.
- Engineered **subscription billing with Stripe** (Checkout, Webhooks, Tiered Plans, Billing Portal) enabling automated provisioning and account lifecycle management.
- Integrated **LLM providers (OpenAI, Azure OpenAI, Gemini, LLaMA)** to deliver chat, AI-generated summaries, and prompt-to-chart capabilities with secure API handling and observability logging.
- Implemented analytics dashboards using Chart.js and optimized UI flows with advanced RxJS patterns and modular Angular components.
- Improved platform scalability using **Kafka** for asynchronous processing and **Docker** for consistent service environments across development and deployment.

Projects

Railway Reservation System — *Python, Flask, REST APIs, HTML/CSS, SQLite*

- Built a full-stack railway reservation platform with **user registration**, train search, booking/cancellation, and complaint management modules.
- Designed and implemented **RESTful APIs** for ticket lifecycle operations (search, book, cancel) with input validation and consistent response handling.
- Implemented persistent data storage using **SQLite** and developed responsive UI screens using **HTML/CSS** for end-to-end functionality.

Fake Product Review Detection & Sentiment Analysis — *Python, Django, TextBlob, NLTK, SQLite, Matplotlib, HTML/CSS, jQuery*

- Developed a Django web app to analyze and classify product reviews using rule-based **NLP** (TextBlob/NLTK) with automated sentiment scoring.
- Categorized reviews into **7 sentiment levels** with color-coded indicators and built **Matplotlib** dashboards to visualize sentiment trends over time.
- Flagged potentially fake reviews by detecting repeated sentiment and keyword patterns; implemented modules for **user login** and review management.

Technical Skills

Languages: TypeScript, JavaScript, Python, Rust, SQL, Java, C++

Frontend: Angular 14, RxJS, Rete.js, HTML5, CSS3/SCSS, Bootstrap 5, Chart.js

Backend & APIs: Node.js, Express.js, REST APIs, Rust (Actix Web), Django; ORMs: Sequelize, Diesel

Data & Infrastructure: PostgreSQL, Kafka, Docker, Firebase Admin, Stripe, Nodemailer

Cloud & Tools: AWS, Google Cloud Platform (GCP), Git, GitHub, Postman, VS Code

Exploring: Quantum computing (IBM Quantum, PennyLane) — Blockchain (Hedera)
